Daisy Huo

I am a passionate third-year student at University of Toronto Mississauga, pursuing a Specialist in Applied Statistics. Throughout my undergraduate journey, I have built a solid foundation in probability and statistics, data analysis, computer science and calculus.

Projects and collaborative coursework include portfolio on combinatorics, analytical essay on juvenile punishment, data analysis paper on the major cause of homeless people and so on. The above experiences have equipped me with proficiency in programming languages R and Python and enhanced my multi-disciplinary knowledge.

Furthermore, I have devoted the past few summers participating in extracurricular activities. Jobs include marketing intern, shopping assistant, activity planner. These internship and volunteer involvements have enriched my academic journey and provided me with valuable group-working and communication skills.

In the future, I will continue my learning path in applied statistics. As my way transitioning into the workforce, I will apply my knowledge and techniques, hoping to make some contributions to the society.
